

Introducing Encrouter, the World's Most Private & Secure Fully Integrated VPN Router

Stockholm, Sweden: Encroute is pleased to announce our flagship product - Encrouter. Encrouter is a fully integrated encrypted VPN router for home and business use. One of the first of its kind, Encrouter enables people to provide pure VPN security for their entire home or business Internet, all from one device.

Encrouter also offers over 20 VPN server locations around the world to ensure better access to the open Internet and localized content with no bandwidth limitations.

Key Product Features:

- Integrated VPN Service
- Over 20 VPN Server Locations Globally
- iOS & Android Mobile Application to Control Settings/Features
- Connect up to 250 devices
- Extremely Fast Wi-Fi 6 Connection
- Ability to Segment Devices to Different VPN Servers (*Coming soon!*)

Encroute's owned and dedicated VPN server infrastructure makes Encrouter the most private and secure VPN router on the market. Encrouter ensures that any device connected to it is protected by WireGuard encryption through the VPN service, ensuring that all connected devices have the same level of security and privacy, without the need for individual VPN setup.

Key Security & Privacy Features:

- 100% Owned & Dedicated Servers
- WireGuard Encryption
- No Log Policy
- Diskless/Driveless Servers
- Portless Servers
- No Access Control
- Blind Operator Mode

Encrouter marks a big step forward in protecting people's homes and businesses from the ever-present dangers to privacy and security on the Internet. People can now sleep a little easier knowing that there is an extra layer of protection preventing unwanted intrusions into the home or business through the internet.

Encrouter is now available in the USA, Canada, and across Europe on www.encrouter.com & Amazon.
